Career Objective

Software Development Engineer with strong CS fundamentals, distributed systems experience, and end-to-end product delivery. Built scalable, low-latency, automation-driven and ML-enabled systems used in production by global users. Delivered high-performance, customer-focused software that solves ambiguous problems and runs reliably at scale.

Experience

Independent Software Engineer (Freelance Consulting)

Remote | 2024–Present

- Partnered with 14+ global cross-functional teams (spanning 5+ countries, including US-based academic and tech collaborators) to engineer automation, deployment, and ML-driven data workflows, integrating advanced optimization techniques and relational databases (e.g., PostgreSQL via JPA) for fault-tolerant, scalable systems achieved 4.8+ client ratings, 50% reduction in deployment errors, and iterative agile support for sustained impact.
- Engineered end-to-end solutions for complex, ambiguous challenges (e.g., real-time data pipelines sustaining 10K+ events/sec), applying distributed algorithms and optimized components to deliver low-latency performance, while fostering team alignment through documentation and post-delivery refinements.

Projects

SynergyApp - Full-Stack API Integration Platform: *Spring Boot, JPA, REST, Docker, Bootstrap*

[Repository](#)

- Designed & deployed a distributed Spring Boot platform processing 1K+ requests/min, cutting workflow errors by 50%.
- Implemented query optimizations with indexing, reducing latency 350ms → 95ms and achieving 10x scalability.
- Automated CI/CD pipelines using Docker, enabling reproducible deployments & 90% faster setup time.

Logs Guard-AI – Intelligent Log Monitoring: *Pandas, Ansible, Docker, Kubernetes*

[Repository](#)

- Built anomaly detection engine using Isolation Forest with strong precision on 10K+ log entries, preventing downtime.
- Designed self-healing deployments with Kubernetes + Ansible, reducing Mean Time to Detect (MTTD) by 40%.
- Applied SRE principles for high availability and fault-tolerant log monitoring at scale.

DriftSiren – Real-Time Data Drift Monitoring: *Next.js, FastAPI, Docker, Redis, TypeScript, ML*

[Repository](#)

- Engineered event-driven backend sustaining 500 events/sec with sub-100ms latency and minimize downtime.
- Developed real-time monitoring dashboard to proactively detect feature drift, preventing model performance degradation.
- Designed containerized microservices for easy scaling & seamless deployment in production pipelines

Education

Bachelor of Engineering – Artificial Intelligence & Machine Learning (ISB&M , Pune)

Graduation Year: 2024 | CGPA: 8.14

Intermediate (ISC) – 82.0% | High School (ICSE) – 89.8%

Technical Skills

- Languages:** Python, Java, JavaScript, C++ (Basics)
- CS Fundamentals:** Data Structures and Algorithms, OOP, System Design, Operating Systems, Complexity Analysis
- Web & Backend:** Spring Boot, FastAPI, Node.js, Express.js, React.js, Next.js, JPA, MongoDB
- Distributed Systems:** Docker, Kubernetes, Ansible, CI/CD
- Machine Learning Tools:** NumPy, Pandas, Scikit-learn, OpenCV
- Problem Solving:** Time & Space Complexity Analysis, Debugging, Algorithm Design, Optimization
- Dev Tools:** VS Code, IntelliJ IDEA, Git, GitHub
- Soft Skills:** Independent Problem Solving, Handling Ambiguity, Team Collaboration, Time Management

Research & Leadership

- Proposed scalable AI architectures for public safety systems, addressing real-world deployment challenges in hybrid cloud environments. Recognized for effective technical articulation in a global academic forum(ICMETET)2024.
- Open-Source Contributions:** Built and published reusable utilities for logging, automation, and monitoring on [GitHub](#), improving developer productivity.
- End-to-End Ownership:** Designed, coded, deployed, and optimized production-ready projects, demonstrating strong adaptability and problem-solving.
